

LISTA DI INDICAZIONI

Every morning make sure your child does not show signs of illnesses. If he has a temperature over 37.5, he cannot go to school.

Make sure that he doesn't have a sore throat or other signs of illness, such as a cough, diarrhoea, headache, vomiting, or muscle ache. If he is not in good health he cannot go to school, he should have a perfect health to go to school.

If he has had contact with a COVID – 19 case, he cannot go to school. Follow carefully the Healthcare guideline regarding quarantine.

Only a parent or an adult (one person) can accompany the child to school; this person must wear a mask and may not stay in the school premises except for cases of necessity and urgency; it is recommended to limit parking on the public road or near the gate for the time strictly necessary to allow your child to enter school.

In case of you have not already done, inform the school about people to contact in case your child does not feel well when he is at school: Names, Surnames, landlines or mobile phones, workplaces, any further information useful to speed up contact.

Practice and let your child practice at home the correct hand washing techniques, especially before and after eating, sneezing, coughing, before applying the mask and explain to your child why it is important. Make it fun; in school, we will do the same.

Unless the school adopts distribution of water in bottles, provide your child with a bottle of water that can be identified by his name and surname. Even if you take the bottle of water from the dispenser at school, you must write your name and surname on it (with a permanent marker or by affixing labels prepared at home)

The learning material must also be labeled or marked with the child's name and surname; the teachers during the meetings will tell you what they plan to bring to school and how they will regulate the activities that involve the use of that kind of objects

Develop daily pre- and post-school routines, for example determining things to place in their schoolbag (such as personal hand sanitizer and an extra face mask) and all the things to do when they return home (washing his hands immediately, where to put the mask according to whether it is disposable or washable.

Remind your children that schoolbags, jackets, coats, shoes are all objects of personal use and they are private property: "take care of them, keep them clean, as you always would. The teachers will help you build a DIY mask holder, to be used when you have to remove the mask (eat, drink, blow your nose into the handkerchief that you will then throw away) "

Talk to your child about the precautions to take at school and at home:

-Wash and disinfect your hands more often

• Keep physical distance from other students, do not create crowds

• Wear the mask. Whatever national decision is made, I strongly recommend these three rules in any case.
